Crisis Recovery Analytics Report

Data-driven analysis of the June 2025 crisis impact and recovery performance across customer behavior, order trends, delivery operations, and customer experience.

The Perfect Storm

What Happened

June 2025 brought a dual crisis: food safety concerns at partner restaurants combined with a week-long delivery outage during monsoon season.

Orders Collapsed

Sharp decline in daily orders and revenue

Customers Left

Significant drop in satisfaction ratings

Partners Lost

Restaurant partners moved to competitors

Analysis Objectives

0

1 Measure Crisis Impact

Quantify effects on orders, revenue, and customer base

0

2 Identify Delivery Issues

Analyze what's affecting delivery performance

0

3 Track Customer Experience

Monitor satisfaction and retention trends

0

4 Monitor City Recovery

Track progress across all markets

0

5 Recommend Actions

Provide data-backed recovery strategies

The Numbers Tell the Story

Comprehensive Impact Summary

The data clearly illustrates a severe downturn during the crisis period. Orders plummeted by **61%**, dropping from 113,806 to just 35,360. Even more critically, revenue experienced a drastic **71% loss**, resulting in a direct financial impact of **₹2.67 crore** during this challenging time.

This sharp decline signifies a major negative impact on overall business activity and earnings, highlighting the urgent need for strategic recovery efforts. Comparing these figures to our pre-crisis baseline, it's evident that the crisis has significantly eroded market performance and financial stability, underscoring the critical importance of effective measures to restore growth and customer confidence.

Customer Exodus

Delivery Performance Breakdown

Time Delays Worsened

Average delivery time jumped from 39.52 minutes pre-crisis to 60.12 minutes during crisis—a 52% increase. Recovery phase showed minimal improvement at 60.05 minutes.

Late deliveries increased cancellation rates from 6.47% (on-time) to 8.01% (late), directly impacting customer satisfaction.

Orders delivered late

Late order cancellations

Customer Ratings Plummeted

Customer experience did not recover even as operations stabilized, indicating deeper trust and quality issues that need addressing.

City Impact Analysis

Chennai – Worst Hit

62.48% decline in orders, dropping from 2,307 to 866 average orders

Kolkata

61.49% decline, falling from 2,094 to 807 orders

Bengaluru

61.46% decline despite being largest market (5,644 to 2,175)

Mumbai & Delhi

Both saw ~61% declines, showing widespread impact

All cities experienced severe declines between 59.86% and 62.48%, indicating the crisis impact was uniform across regions.

Partial Recovery Underway

Recovery orders at 8.78K represent only 38.6% of pre-crisis levels.

Revenue Stabilized

₹8.14M recovered, monthly range ₹2.64M–₹2.89M

Ratings Still Low

Peaked at 2.69 in July, declined to 2.31 by September

Delivery Unchanged

Time remains around 60 minutes, no improvement

City Recovery

Pune leads at 40%, Chennai lags at 37%

Path Forward: Key Recommendations

Fix Delivery First

Improve rider availability and route optimization to restore 40-minute delivery times

Win Back Customers

Launch targeted campaigns for 72K churned customers with discounts and loyalty rewards

Focus Organic Channels

Shift budget to Organic (52K) and Referral (14K) channels that drive retention

Rebuild Restaurant Base

Re-activate 3.3K lost restaurants with incentives and operational support

Prioritize High-Impact Cities

Support Chennai and Bengaluru with targeted recovery plans and commission relief

Quality Over Volume

Focus on customer experience KPIs, not just order count during recovery
