

QuickBite Express

Crisis Recovery Analytics Report

1. Executive Summary

QuickBite Express faced a significant crisis in **June 2025**, leading to a sharp decline in **order volumes, revenue, and customer satisfaction**, along with an increase in **delivery delays**.

This report provides a **data-driven analysis** of the crisis impact and recovery performance across **customer behavior, order trends, delivery operations, and customer experience**. Using **SQL for analysis** and **Power BI for visualization**, the study identifies **key problem areas**, tracks **recovery trends**, and provides **actionable recommendations** to support **long-term business stability and growth**.

2. Problem statement & Business Context

QuickBite Express, a **Bangalore-based online food delivery startup founded in 2020**, faced a major crisis in **June 2025** due to **food safety concerns at partner restaurants** and a **week-long delivery outage during the monsoon season**.

The crisis resulted in:

- Sharp decline in daily orders and revenue
- Significant drop in customer satisfaction ratings
- Increased cancellations and delivery delays
- Loss of restaurants partners to competitors

3. Objectives of the Analysis

The key objective of this analysis are to:

- Measure the impact of the crisis on orders, revenue, and customers
- Identify what affecting the delivery performance
- Analyze customer experience and satisfaction trends
- Track recovery progress across cities
- Provide data-backed recommendations for business recovery

4. Dataset Overview

4.1 Data Scope

- Time Period: January 2025 – September 2025

4.2 Table Used

- Customers
- Orders
- Ratings
- Delivery
- Restaurants

5. Business Questions (SQL Analysis)

5.1 Compare total orders across pre-crisis vs crisis. How severe is the decline?

Phase	Total Orders
Pre-Crisis	1,13,806
Crisis	35,360

- Total orders dropped sharply during the crisis period.
- Orders decreased from **113,806 before the crisis to 35,360 during the crisis**, showing a large drop in customer demand.
- This shows that the crisis had a **major negative impact on overall business activity**.
- Overall, orders fell by **around 69% during the crisis**, which shows the decline was severe.

5.2 Total revenue before crisis vs crisis

Metric	Amount
Pre-Crisis Revenue	₹3,76,20,964
Crisis Revenue	₹1,09,40,151
Revenue Loss	₹2,66,80,812
Revenue Drop %	70.92%

- Total revenue dropped sharply during the crisis period.
- Revenue decreased from **₹3,76,20,964 before the crisis to ₹1,09,40,151 during the crisis**.
- This resulted in a **revenue loss of ₹2,66,80,812**.
- Overall, revenue fell by **70.92%**, showing a strong negative impact on business earnings.

5.3 Customer churn during crisis period

Metric	Value
--------	-------

Customers before June	86,824
Customers returned during crisis	13,959
Churned Customers	72,865
Churn percentage	83.92%

- Out of **86,824 customers** who were active before June, only **13,959 customers returned during the crisis period**.
- This means **72,865 customers did not return**, resulting in a **churn rate of 83.92%**.
- The Higher churn percentage shows that the crisis had a strong negative impact on customer retention.

5.4 Average Delivery time by Phase

Phase	Average Delivery Time (mins)
Pre-Crisis	39.52
Crisis	60.35
Recovery	60.05

- Average delivery time increased during the crisis period compared to the pre-crisis phase.
- Delivery time from **39.52 minutes before the crisis** to **60.35 minutes during crisis**, showing significant delays.
- Delivery performance did not fully return to pre-crisis levels during the **recovery** phase, with average delivery time remaining high at **60.05 minutes**.
- **63.46% of orders were delivered late than expected**, confirming that delivery delays were very common.

5.5 Did late deliveries increase cancellations?

Delivery Status	Total Orders	Cancelled Orders	Cancellation Rate
Late	95,226	7,623	8.01%
On-Time	53,940	3,489	6.47%

- Orders delivered late had a **higher cancellation rate (8.01%)** compared to **on-time deliveries (6.47%)**.
- This shows that **late deliveries increased the chances of order cancellations**.
- Improving delivery speed can help reduce cancellations and improve customer experience.

5.6 Average Customer Rating pe Phase

Phase	Average Rating
Pre-Crisis	4.5
Crisis	2.5
Recovery	2.4

- Customer ratings dropped sharply during the crisis period compared to the pre-crisis phase.
- The average rating fell from **4.5 before the crisis to 2.5 during the crisis**, showing lower customer satisfaction.
- Ratings remained low during the recovery phase (**2.4**), indicating that customer experience did not fully improve.

5.7 Partner type Performance

Partner Type	Total Restaurants	Total Orders	Total Revenue
Restaurant	14,023	1,04,862	₹3,41,49,151
Cloud Kitchen	5,906	44,304	₹1,44,11,964

- Restaurants partners performed better than cloud kitchen in term of total orders and total revenue.
- Restaurants generated **higher order volume and revenue**, mainly because they have a larger number of active outlets.
- Cloud kitchens contributed a smaller share but still played an important role in overall business.

5.8 Which city experienced the highest percentage decline in orders during the crisis period compared to the pre-crisis period?

City	Average Pre-Crisis Orders	Average Crisis Orders	Decline Percentage
Chennai	2,307	866	62.48%
Kolkata	2,094	807	61.49%
Bengaluru	5,644	2,175	61.46%
Hyderabad	2,309	897	61.14%
Ahmedabad	1,871	729	61.04%
Mumbai	3,362	1,316	60.85%
Delhi	3,367	1,325	60.64%
Pune	1,807	725	59.86%

- All cities saw a significant drop in orders during crisis period.
- **Chennai** experienced the **highest decline in orders (62.48%)** compared to the pre-crisis period.
- Other major cities such as **Kolkata, Bengaluru, and Hyderabad** also faced declines of over **60%**.
- This shows that the crisis impact was widespread, but some cities were affected more than others.

5.9 Which acquisition channel brings better returning users?

Acquisition Channel	Total Customers	Returning Customer	Returning Percentage
Organic	51,876	18,607	35.86%
Referral	14,378	5,010	34.84%
Social	10,419	3,470	33.30%
Paid	23,577	7,179	30.45%

- **Organic channel has the highest returning percentage (35.86%)**, meaning it brings the most loyal customers.
- **Referral and Social channels** also bring returning users, but **Paid** campaigns have the lowest returning percentage.
- Focusing on **Organic and Referral channels** could improve customer retention and long-term value.

6. Dashboard Overview

6.1 Crisis Overview Dashboard

Summary:

The Crisis Overview Dashboard highlights the overall business impact of the **June 2025** crisis on QuickBite Express. **Average daily orders decline sharply from 22.8k to 8.84k** during the crisis, **reflecting a 61% drop**, while **total revenue fell by 71%, from ₹37.62M to ₹10.94M**.

Order trends show a **sharp fall in June with 9,293 orders**, followed by continued decline in **July and August**. A slight improvement appears in **September with 8,694**, indicating early recovery. Revenue trends mirror this pattern, dropping sharply in **June to ₹28,87,866** and recovering marginally to **₹26,84,804 in September**, but still remaining below pre-crisis levels.

6.2 Delivery & Rating Overview

Summary:

During the crisis, delivery performance declined sharply. Average delivery time increased from **39m 52s to 60m 12s (52%)**, while customer ratings dropped from **4.5 to 2.5 (-80%)**.

Late deliveries had higher cancellations (**7,623**) compared to on-time orders (**3,489**). Late orders were highest pre-crisis (**64,818**), fell sharply during the crisis (**7,948**), and partially recovered (**23,097**). Overall, delivery performance worsened during the crisis and recovered only partially.

6.3 Customer Experience

Summary:

The Customer Overview shows that the June 2025 crisis had a strong negative impact on QuickBite Express. The platform had **86.8K active customers before the crisis**, but only **14.0K customers returned during the crisis**, resulting in a high **churn rate of 84%**. Monthly customer counts, which were above **20K before the crisis**, dropped sharply to around **8K per month** during the crisis.

New customer acquisition was hit the hardest, falling from **21K-13K** pre-crisis to **4.7K-3.8K** during the crisis, while returning customers stayed relatively stable at around **4.0K-4.4K**. In terms of acquisition channels, **Organic performed best with 52K customers**, followed by **Paid (24K)**, **Referral (14K)**, and **Social (10K)**, showing that organic and referral channels are key for customer recovery and retention.

6.4 City & Restaurant Impact

Summary:

The City & Restaurant Impact dashboard shows that the June 2025 crisis affected **8 major cities**, resulting in a total revenue loss of **₹26.68M**. **Chennai** was the worst-hit city, recording a **62.48% decline in orders**, followed closely by **Kolkata (61.49%)**, **Bengaluru (61.46%)**, and **Hyderabad (61.14%)**. Overall, city-wise order declines ranged between **59.86% and 62.48%**, indicating a widespread and uniform impact across regions.

From a restaurant perspective, **19.98K restaurants were impacted** during the crisis. Active restaurants dropped from **19.91K pre-crisis to 16.59K during the crisis**, reflecting a loss of over **3.3K active restaurants**. Average orders declined sharply across all cities for example, **Bengaluru fell from 5.6K to 2.2K**, **Delhi from 3.4K to 1.3K**, and **Mumbai from 3.4K to 1.3K** orders highlighting a significant reduction in restaurant activity and demand during the crisis period.

6.5 Recovery

Summary:

The recovery dashboard shows **partial business improvement** after the crisis. Average recovery orders stand at **8.78K**, which is **38.6% of pre-crisis levels**, generating **₹8.14M in recovered revenue**. Monthly revenue stabilized between **₹2.64M–₹2.89M**, while orders dipped from **9.3K in June** to **8.6K in August** before a slight recovery to **8.7K in September**.

Customer experience remains a concern during recovery. Average ratings peaked at **2.69 in July** but declined to **2.31 by September**, and delivery time showed minimal improvement, hovering around **60 minutes**. City-wise recovery is consistent, ranging from **37.4% to 40%**, with **Pune (40%)** performing best and **Chennai (37%)** lagging, indicating recovery is underway but not yet strong or stable.

7. Conclusion & Business Recommendations

Conclusion:

The June 2025 crisis had a severe impact on QuickBite Express, causing a **61% drop in orders** and a **71% decline in revenue**. Operational disruptions led to a **52% increase in delivery time** and a sharp fall in **customer ratings from 4.5 to 2.5**, resulting in high cancellations and an **84% customer churn rate**. The impact was consistent across cities and restaurants, with over **3.3K restaurants becoming inactive**.

Although recovery has begun, **performance remains below 38% of pre-crisis levels**, while delivery times and ratings have not fully improved. This indicates that long-term recovery will depend on fixing delivery operations, rebuilding customer trust, and stabilizing restaurant partnerships rather than focusing only on order growth.

Business Recommendations:

- **Fix Delivery operations as top priority**
Delivery time increased by **52% (39.52 – 60.12 mins)** and ratings dropped from **4.5 to 2.5**, directly driving cancellations (**7,623 late-order cancellations**). Improve rider availability, route optimization, and SLA monitoring to restore service quality.
- **Focus on customer retention to reduce churn rate (84%)**
Only **14K of 86.8K customers returned** during the crisis. Launch win-back campaigns (discounts, free delivery, loyalty points) targeting inactive pre-crisis customers.
- **Double down on Organic & Referral channels**
Organic (**52K**) and Referral (**14K**) outperformed Paid and Social. Shift marketing spend toward SEO, app engagement, referrals, and word-of-mouth instead of heavy paid ads.
- **Support high-impact cities and restaurants first**
Cities like **Chennai (62.5% decline)** and **Bengaluru (61.4%)** need targeted recovery plans. Provide temporary commission relief and operational support to restaurants that lost the most volume.
- **Stabilize restaurant supply**
Over **3.3K restaurants became inactive** during the crisis. Re-activate key partners with incentives, onboarding support, and demand guarantees to rebuild supply-side strength.
- **Improve recovery quality, not just volume**
Recovery orders are only **38.6% of pre-crisis**, while ratings remain low (**2.31–2.69**). Recovery efforts should prioritize **customer experience KPIs**, not just order count.
- **Set city-level recovery benchmarks**
Recovery is uneven (**37%–40%**). Use Pune (**40% recovery**) as a benchmark and replicate best practices across lagging cities like Chennai.

8. Tools & Technologies Used

- **Python & Pandas** – Data cleaning, preprocessing, feature creation, exploratory data analysis (EDA)
- **SQL** – Querying, filtering, answering business questions
- **Power BI** – KPI tracking, interactive dashboards, and data visualization
